e-Medsys EHR and the Urology Practice

Hematura, Vasectomy, Incontinence, Prostate, Urinary Tract, Ultrasound findings and more are all areas of concern to the Urology practice, and tracking the urology patient's clinical and medical data with **e-Medsys EHR** makes it all simple and easy to do.

With **e-Medsys EHR**, the Urologist can capture the encounter electronically… family history, medications, allergies, ROS, urologic treatment plans are all accomplished through **e-Medsys EHR.**

And interfaced to the **e-Medsys PM** for billing, the system automatically inputs diagnoses and procedure codes (as well as associated fees) directly through the **electronic superbill during the** encounter. When the patient returns to the front desk before leaving, all of that data is in the system…no need for office staff to manually post from paper superbills.

This makes the entire workflow incredibly streamlined, as noted by **Ken Friedmann, Practice Administrator of Urology Associates of San Luis Obispo** (CA), a large, high volume urology practice in CA.

"**e-Medsys EHR** is such a powerful yet easy to use system which has totally revamped the way we operate our practice. Files and paper are no longer used. The Urology templates are customized to the physicians' preference. Prescription-issuing and medication management is a breeze, and ordering labs and obtaining results is too simple to believe."

These are only a few of the features and benefits that come with **e-Medsys EHR.** PracticeOne's own, patented **E / M Coder** ensures that coding levels are correct for maximum reimbursement, and our PracticeOne-developed **Health Watcher** keeps tabs on health maintenance issues, alerting patients and physicians of next actions needed, based upon the patient's medical condition.

These features bring tremendous efficiencies to the Urology practice in terms of automating so many steps that would normally require staff time. "Staff time" also includes the physicians.

As Ken mentions, "the physicians can see their virtual in-boxes though the **Doctor's Home Page** which displays schedules, items needing signature, lab results, etc. Everything that would normally bury the doctor's desk is now in an organized, electronic format right on the doctor's computer."

The group looked at many possible solutions and decided on **PracticeOne** and **e-Medsys**, and Ken will tell you it was absolutely the correct decision.

e-Medsys EHR can bring tremendous efficiencies to your Urology practice as well.

Contact **PracticeOne** at **877-363-3797, Extension 2922** to schedule an overview of our e-Medsys EHR, and find out how your Urology practice can eliminate redundancy and drudgery with a high level of sophisticated automation.
